

FOR IMMEDIATE RELEASE

ChillXand Launches Solana RPC to Support Solana and Xandium Builders looking to build decentralized dApps

[Remote / Solana Ecosystem] — ChillXand today announced the launch of its new Xandium compatible, **Solana Remote Procedure Call (RPC) service**, designed to support developers testing applications and services built on **Xandium**, the emerging decentralized storage layer for **Solana**.

The RPC launch follows growing momentum across the Xandium ecosystem, highlighted by **177 submissions** to Xandium's recent Superteam bounty program—an early indicator of strong developer interest in scalable, storage-enabled Solana applications.

ChillXand's RPC provides builders with a streamlined, low-friction way to interact with the Solana blockchain while testing storage-heavy workloads, infrastructure integrations, and experimental decentralized applications. The RPC has extended support for Xandium's storage layer RPC calls making it a perfect option for anyone building on either blockchain.

“Builders are moving fast, and infrastructure shouldn't slow them down,” said a ChillXand spokesperson. “This RPC is about giving developers a reliable, stress-free way to test and iterate while the Solana and Xandium ecosystems mature. We told builders ‘we got you’—and we mean it.”

As a Xandium-flavored Solana RPC, it delivers full compatibility with standard Solana RPC methods while also supporting Xandium's extended storage layer API calls—giving developers a single endpoint for both ecosystems.

The ChillXand RPC is available immediately and can be accessed and configured at <https://chillxand.com>, where developers can sign up, manage usage, and select a plan that fits their testing or production needs.

RPC Pricing & Plans

ChillXand offers transparent, developer-friendly pricing designed to scale from early testing to production workloads:

Free — \$0 / month

- 1 RPS
- 1,000 requests daily
- 5,000 requests monthly

- 1 WebSocket Connection

Starter — \$19 / month

- 20 RPS
- 100,000 requests daily
- Unlimited monthly requests
- 5 WebSocket Connections

Pro — \$99 / month

- 100 RPS
- 1,000,000 requests daily
- Unlimited monthly requests
- 10 WebSocket Connections

Business — \$299 / month

- 300 RPS
- 5,000,000 requests daily
- Unlimited monthly requests
- 50 WebSocket Connections

These tiers are designed to support individual builders, Superteam participants, and teams preparing for larger-scale deployments on Solana and Xandium.

One RPC. Full Compatibility.

Standard Solana JSON-RPC + Xandium Storage Layer API — no separate endpoints required.

With native support for both Solana and Xandium RPC calls, the ChillXand RPC is intended for:

- Xandium developers and testers building on the storage layer
- Superteam bounty participants
- Solana developers experimenting with data-intensive or storage-dependent use cases

ChillXand plans to expand RPC performance options, analytics, and enterprise features as Xandium continues to expand its network and more demanding applications and services are brought online..

About ChillXand

ChillXand provides developer-first infrastructure services for the Solana ecosystem, focused on reliability, simplicity, and operational peace of mind.

About Xandium

Xandium is building the decentralized storage layer for Solana, enabling scalable and cost-effective data availability for next-generation blockchain applications.
